Innovation Talk Webinar:

Generation Of Wireless Network, Cloud & A.I. Technologies In Smart Building Management System

15 December 2021| 2.30 p.m.-4.45p.m.

*BEM CPD point applied

Collaboration with ASHRAE MALAYSIA

Platform: Zoom

Presented by:

Mr. David Glover; Senior Software Engineer
B.S. (Electrical Engineering),
M.S. (Electrical and Computer Engineering)

Ms. Samaneh Nadali; Data Scientist
B.S. (Computer Engineering)
M.S. (Management Information System)
Ph.D. (Information System)

Duration	Session
45 minutes	Extending BMS Reach Through Wireless Networks and Cloud Technology Cloud connected BMS allow essential access to monitoring or controlling of the system, while wireless sensors and controllers can be used to expand the BMS more efficiently within the building and surroundings.
45 minutes	The Artificial Intelligence in Smart Building Management System Buildings generate data. Advanced algorithms and artificial intelligence (AI) are essential to lower operating cost, reduce operational and financial risk, while improving building efficiency and profitability.
